

FOOD

Certification Details

Regulatory Context and Regulatory Compliance

Our range of materials certified according to Regulation (EC) No. 1935/2004 and Regulation (EU) No. 10/2011 represents the excellence of our offering in the food-grade segment. As many of our customers know, these regulations impose strict global and specific migration standards to ensure absolute food safety, with specific tests on amines, metals, prohibited substances and sensory characteristics.

Rationalization of the Range Review

During our periodic review of certified products, we had to make a qualitative selection of the materials kept in our portfolio. Some compounds formulated with specific fillers no longer comply with the Certified on provided by our raw material suppliers. Although this situation affects only a limited portion of our historical range, it reflects the growing regulatory commitments and increasingly stringent quality standards that characterise the sector.

The Value of Our Current Offer

Our range represents a concentrated and reliable selection of EU+FDA or EU-only certified materials, covering virtually all major applications in the food industry:

- Virgin and modified PTFE in standard and colored versions
- Compounds with glass fibers at different reinforcement levels
- Advanced composites with molybdenum disulphide, graphite and Ekonol
- High-performance solutions with PEEK and PVDF

Competitive Advantages for Our Customers

This evolution guarantees our customers:

Maximum traceability and reliability: every material on our list is certified by recognised bodies and supported by complete documentation

Reduced regulatory risk: guaranteed compliance with the most stringent European and North American food regulations

Valuable partnerships: we work with filler suppliers who maintain the highest standards of compliance over time.

Test

In order to certify our materials, the following tests* were performed:

Tests for Regulation (EC) No 1935/2004 and Regulation (EU) No 10/2011

- Global migration tests in food simulants
- Specific migration tests for amines
- Specific migration tests for metals
- Specific migration tests for restricted substances
- Sensory tests
- Screening tests
- Colour tests (if pigmented)

Testing for FDA Regulation 21CFR 177.1550.

- Total extracts
- Specific migration of fluorides

* The tests carried out were selected and agreed upon with the Certifiedon body on the basis of declarations relating to the raw materials used. It is not possible to submit a material for verification for a specific Certifiedon without prior approval.

Certified Materials
